PRODUCT ADVANTAGE

Warmth of wood

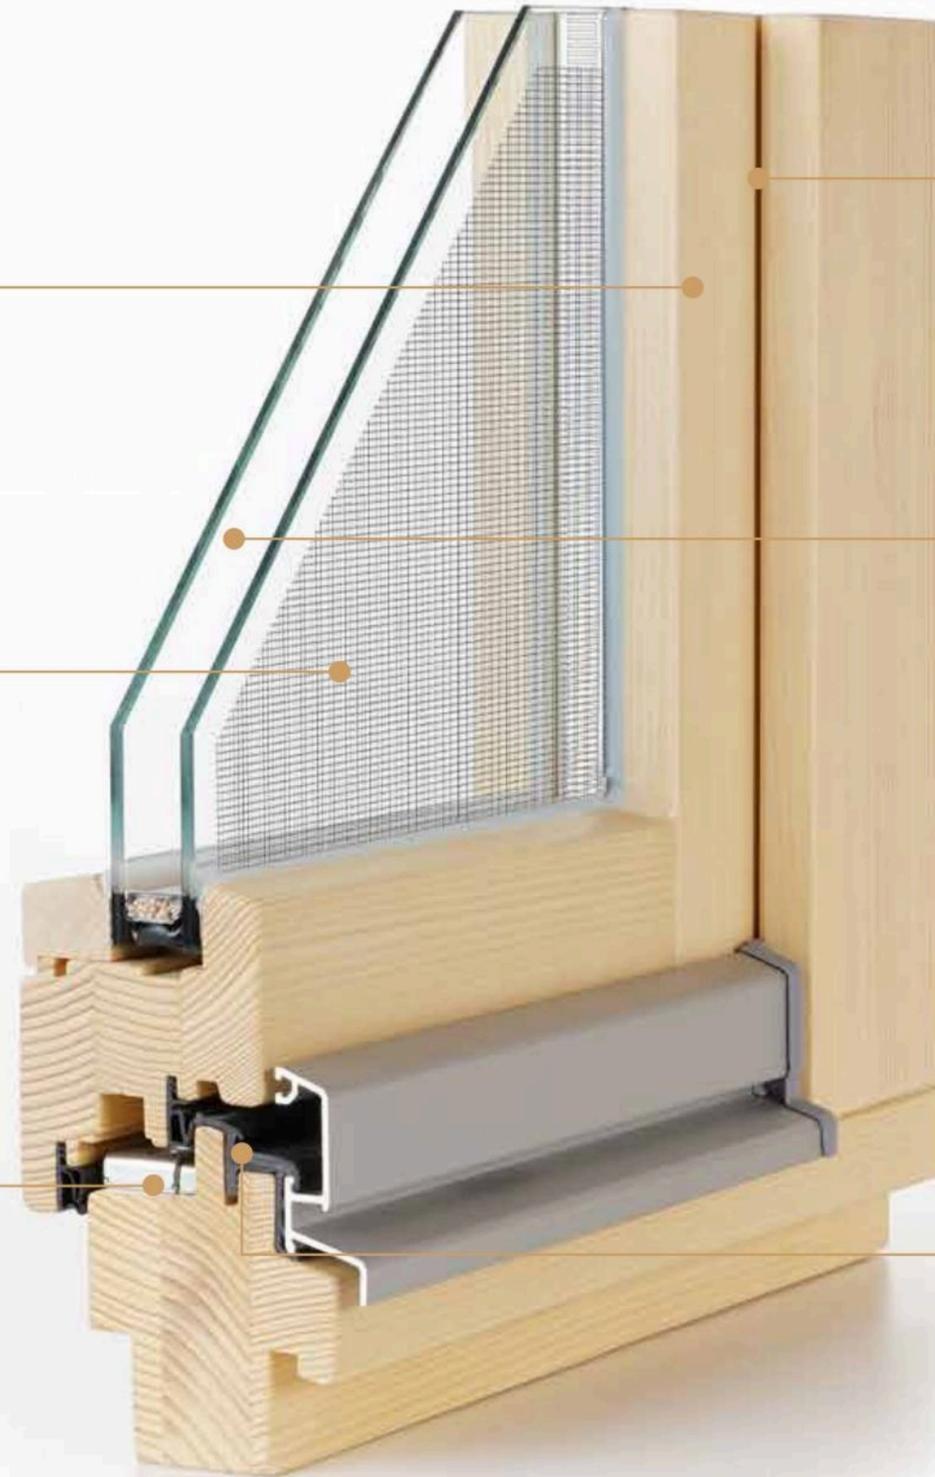

Natural material makes it a sustainable design, freedom of customizations & R&D for many possibilities of operations.

Mesh screen

An increasing necessity in our vernacular living, this customization is a value addition in the opening for doors & windows. This feature makes the product more popular than its competitors.

Hardware & ease of use

With installation for high-end European hardware like window & door fittings, hinges, handles, etc., even for really large opening, the ease of use of window & door mechanisms with our accurate installations is outstanding.

Hardware & Safety

Installation of fitting with multipoint locking systems allows for increase security for large openings in prestigious projects.

Glass advantages

With DGU laminated glass, the product provides added security, higher thermal insulation & sound insulation from the outside world.

Seals

Seals allow for gaps to become airtight. Not only do they act as weather protection but also allows for the margin for wood expansion & contraction, making the play in the natural material negligible & workable.

TYOLOGY OF WINDOW

Fixed and Openable

Lift and Slide

Tilt and Turn

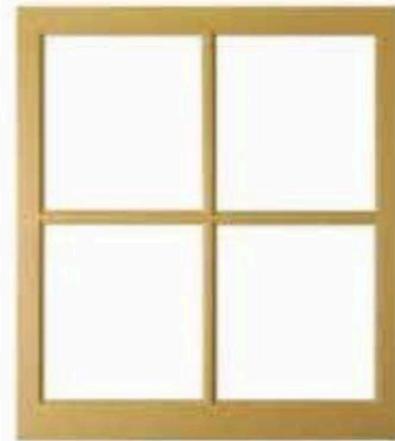

Slide and Fold

FIXED & OPENABLE

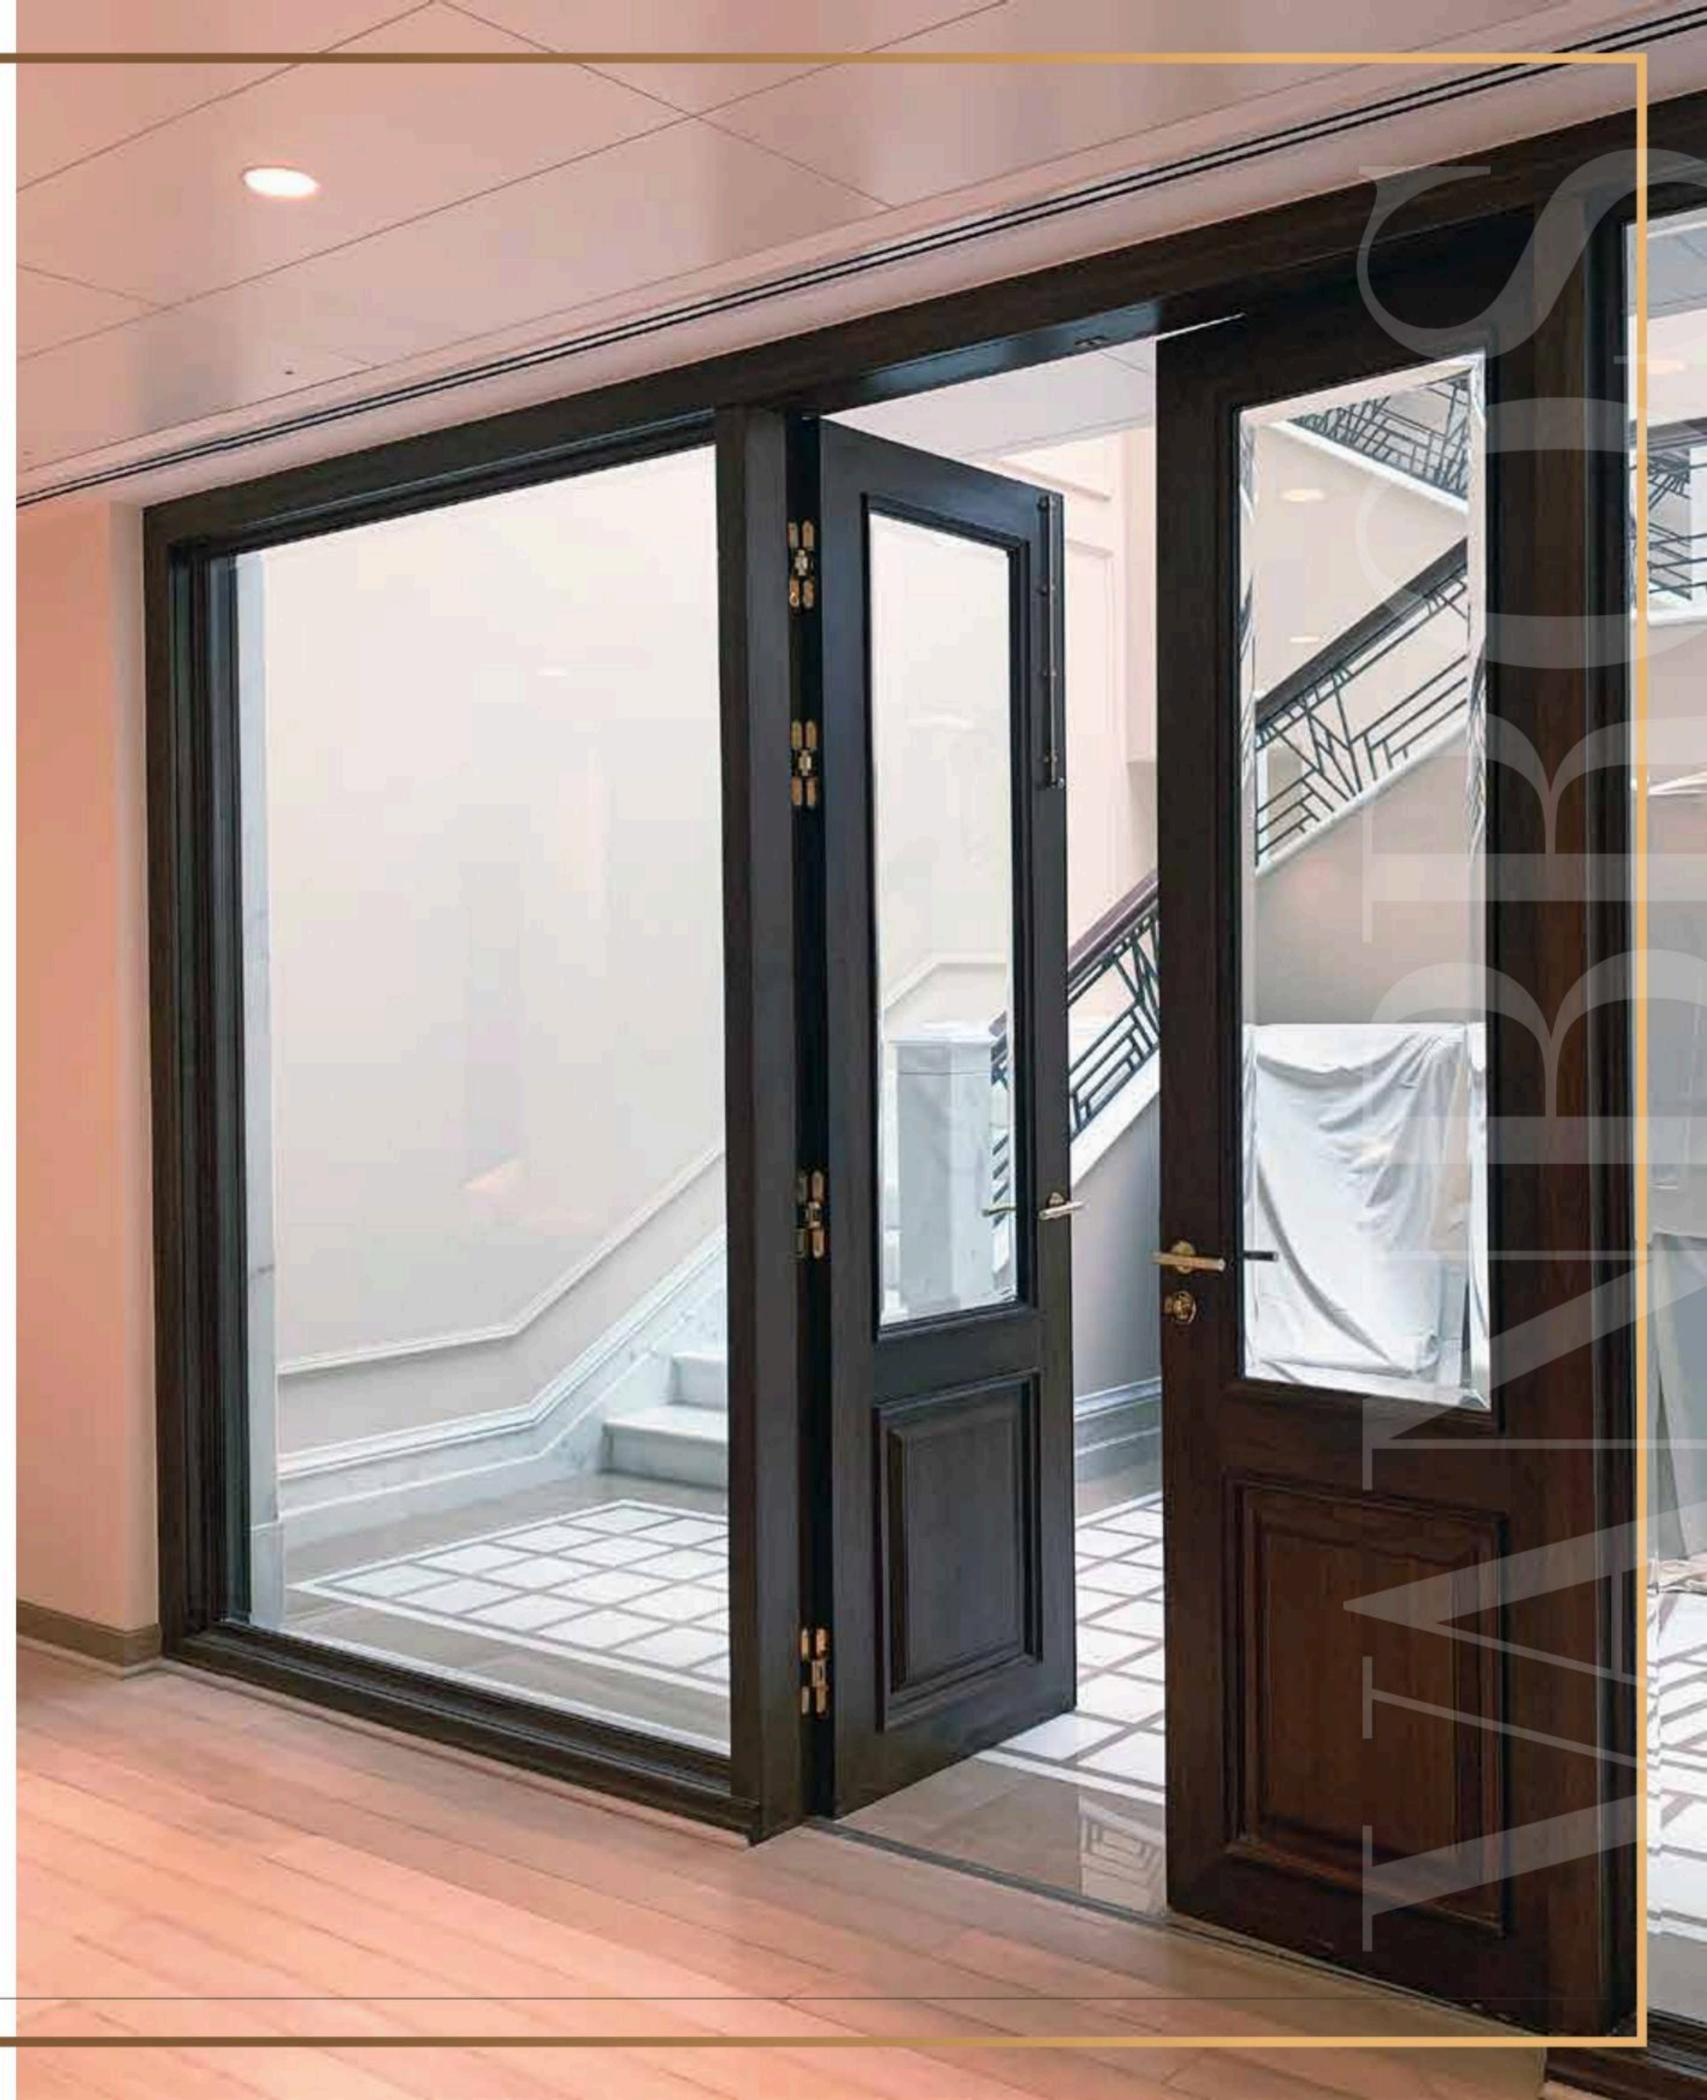

Fixed

A fixed windows is airtight & allows for inlet of light. It can be designed in various forms with sashes in frames and so on.

Openable

Windows can be a traditional wooden window at home with concealed hardware and a safety handle. Or maybe a barrier-free balcony door with a totally flat threshold.

TILT & TURN

Closed

3 Windows in 1, they provide more value and functionality than traditional fixed, in-swing, or tilt windows, and hence are versatile to use for any space.

Turn

With the handle in the “turn” position, the sash turns on side hinges like your standard window.

Tilt

With the handle in the “tilt” position, the sash tilts inwards at the top, providing draft-free ventilation while maintaining the security and privacy.

LIFT & SLIDE

Lift & Slide

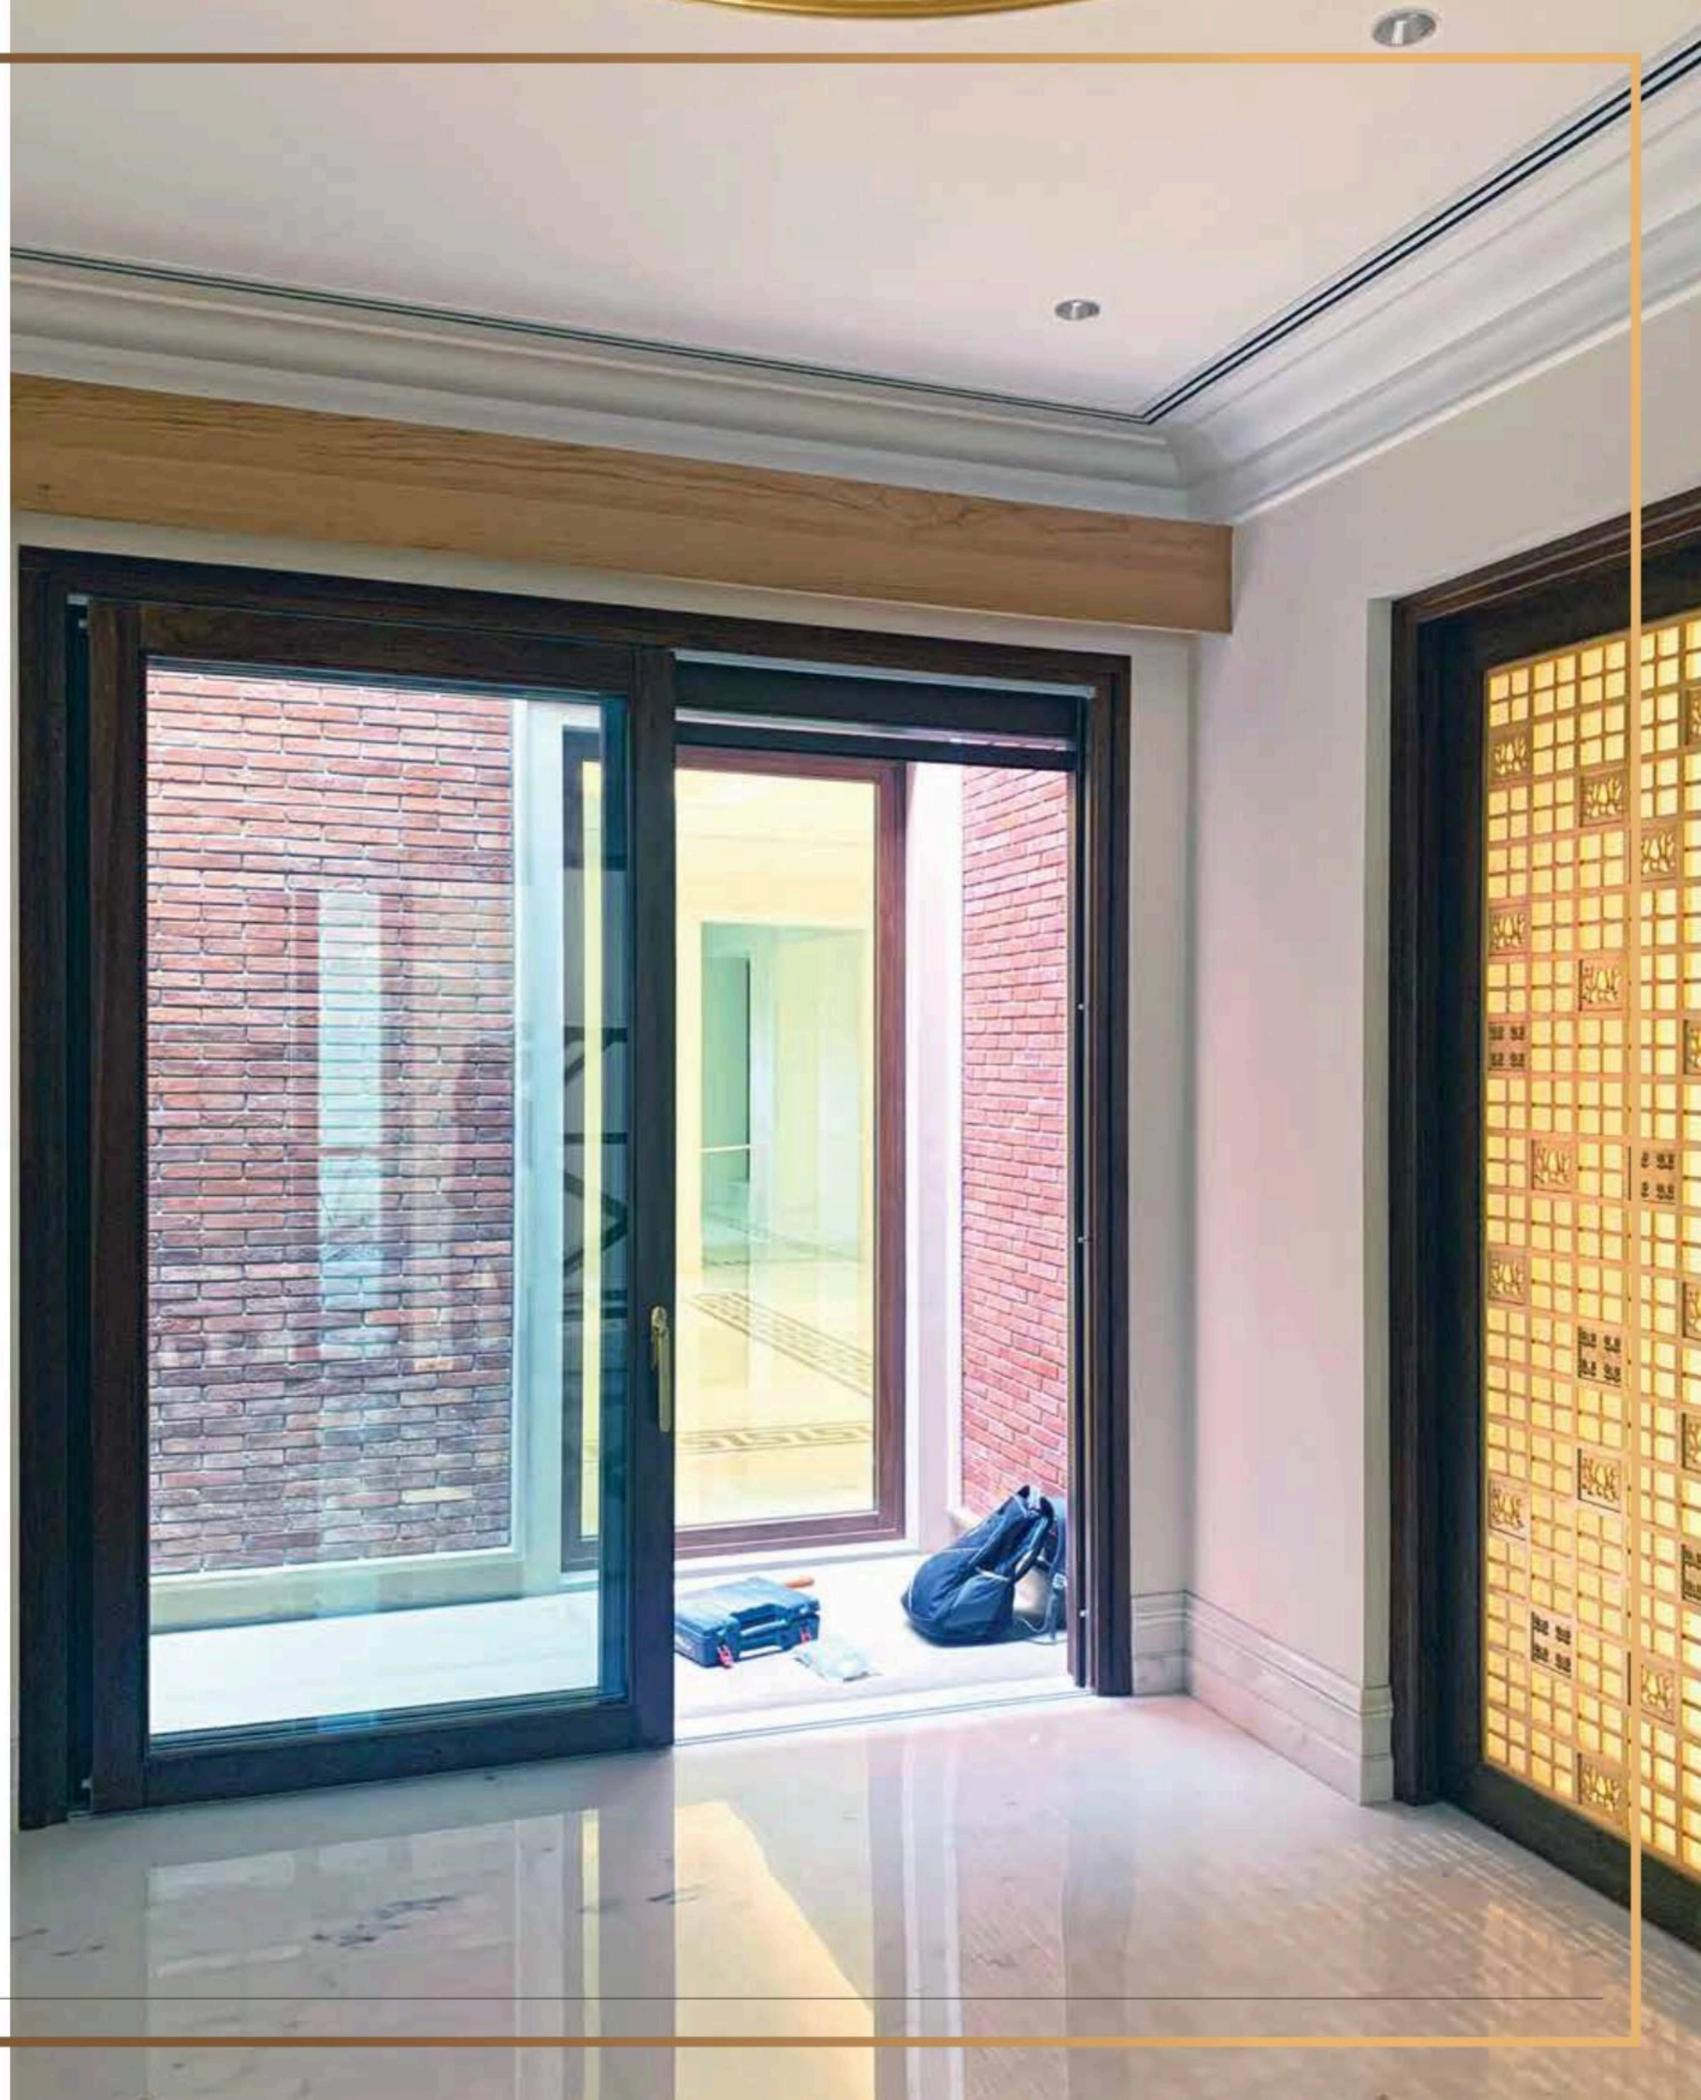

Used for large opening, these doors can still be opened with one hand and closed with just the push of a finger. The doors have optimum sealing making them the most energy saving products.

A lift/slide is a door that uses special hardware allowing the panels to lift off their track and weather-stripping and glide open or closed.

When it's time to close the glass doors, the handle lowers the panels on the track for a tight fit.

SLIDE & FOLD

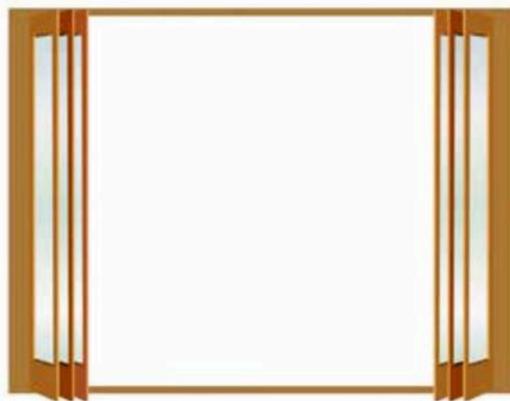

Slide

Slide & fold windows offers a combination of performance and aesthetics, with larger glass units offering panoramic views enabling more natural light and ventilation.

As the panels open outwards, one doesn't need to create any space for them inside.

ACCESORIES & HARDWARE

Insect Mesh

Flyscreens we can keep the windows wide open, allowing the air to enter the room, while keeping the annoying mosquitos outside: a good air circulation.

Vertical

Horizontal

Seals

Seals are for comfortable closing force, Coping high tolerances and allowing for Excellent flexibility for temperature fluctuation in seasons
